¿Cómo elegir un Bombillo?

Para elegir el bombillo adecuado debemos tomar en cuenta varios aspectos.

Área a iluminar

Tipo de base de bombillo

Consumo y vida útil

Ubicación de la fuente de la luz

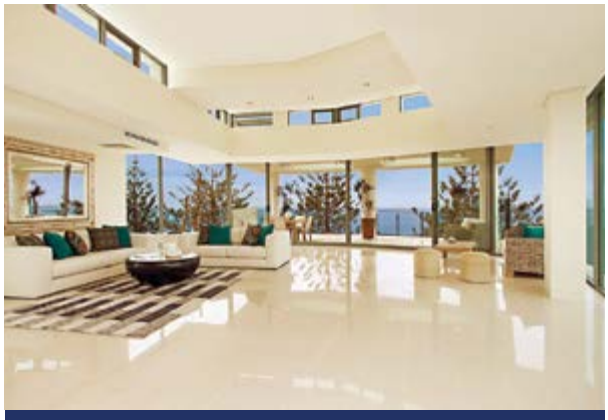

Color e intensidad de la luz deseada

Elige **Westinghouse**

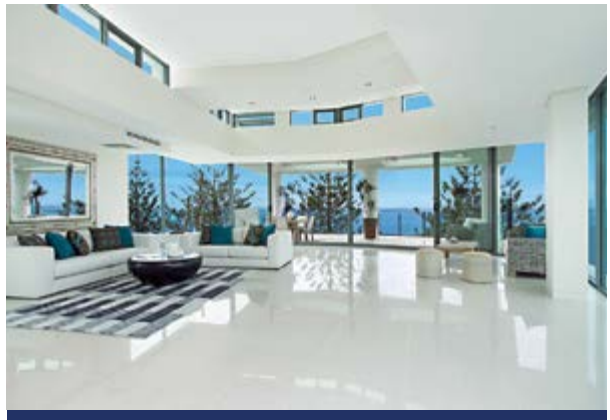

La distribución y tipología de fuentes de luz que usas en tu hogar, ¿puede ser más eficiente? No pierdas dinero ni derroches energía. Estudia con atención la ubicación de tus bombillas según la utilidad que das a cada estancia y adecúa tu consumo y gasto a tus necesidades.

Área a iluminar

La LUZ puede crear una determinada ATMÓSFERA, comunicar SENSACIONES y suscitar ATENCIÓN.

Si iluminamos una habitación de paredes blancas con lámparas incandescentes, se acentuarán los tonos marrones y rojizos y las paredes parecerán tener un color de tendencia amarillenta que hará que la habitación resulte CÁLIDA.

Si la misma habitación la Iluminamos con lámparas fluorescentes, se acentuarán los tonos verdes y azules y la habitación tendrá un aspecto más FRÍO.

Kelvin es la medida empleada para saber que color de luz ofrece el bombillo.

Verifique si su lámpara es de techo, pared, mesa, pedestal u otra. Confirme qué tipo de socket usa y que tamaño de bombillo puede usar.

Para saber qué bombillo ilumina más que otro y su eficiencia, debemos revisar los lumens y los watts. A mayor cantidad de lumens más intensidad de luz y a mayor cantidad de watts mayor consumo energético. Los bombillos fluorescentes y los bombillos de LED ofrecen una gran intensidad de luz y una disminución significativa de consumo si los comparamos con bombillos incandescentes y halógenos.

Tipo de base de bombillo

Existen bombillos con diferentes tipos de base entre las más comunes están:

Dos Pines | Estándar E26 / E27 | E12 Candelabro | E14 Europea | G9 | GU5.3 | GU10

How can you choose a light bulb?

To choose the right bulb must take into account several aspects .

Area to iluminate

Type of bulb base

Consumption and useful life

Location light source

Color and intensity of desired light

Choose **Westinghouse**

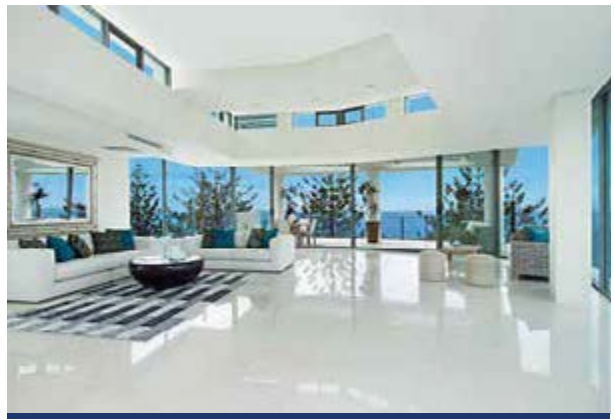

The distribution and types of light sources you use in your home, can be more efficient? Do not waste money or energy wastage . Study carefully the location of your bulbs according to the utility that give each room and adjusts your consumption and spending your needs.

Area to iluminate

Light can create a mood, communicate feelings and arouse ATTENTION.

If we illuminate a room with white walls with incandescent lamps, brown and reddish tones are enhanced and the walls appear to have a yellowish color trend that result will make the room Warm Whiteer.

If the same room with the fluorescent lamps illuminate, green and blue tones are enhanced and the room will have a cooler look.

Kelvin is the measure used to know that color light bulb offers .

Check if your lamp is a ceiling, wall, table, pedestal or another. Confirm what type of socket used and bulb size can use.

To find out which bulb illuminates more than another and efficiency, we must review the lumens and watts. The more lumens more light intensity and a greater number of watts higher energy consumption. Fluorescent bulbs and LED bulbs offer a light intensity and a significant decrease in consumption when compared to incandescent and halogen bulbs.

Bulb base types

There bulbs with different base rates among the most common are:
