NEBO® technology

In a world of rapidly changing technology, keeping up with the latest trends is hard, but doing so only takes you as far as someone else has already gone. At NEBO, we like to explore uncharted territories. That's the trailblazer mind-set. What makes NEBO better? What makes NEBO different? The answers can be found in our technology, where instead of just asking why, we ask "why not?"

C•O•B features smaller, easier clustered LED chips that work together as one lighting module. With this design, C•O•B outperforms traditional lighting with more output, less energy consumption and longer LED life span.

ARCUS is a new proprietary C•O•B LED technology that allows the shaping of light into full 3D patterns, giving optimal, bright, uniform light exactly where it's needed.

Flex-Power gives the ability to use different quantities of the same battery, or two different battery types, such as rechargeable and standard alkaline.

OC Technology™ creates a perfectly dispersed beam of intense, pristine light that is as bright on the edge as it is in the center when used in flood mode.
